

Midlab presents: **Long-Term Care**

HOW CLEAN IS YOUR *facility?*

DOES YOUR FACILITY PASS THE TEST? Germs can lurk in a number of places around your Long-Term Care facility. These spots might actually be some of the germiest places in your facility.

The RESTROOMS

It's not surprising that germs thrive in restrooms. From the faucets to the floors and toilets, germs are sure to be found on many of the surfaces in your restrooms.

The TELEPHONE

The telephone is a germ hotspot because it's touched frequently, but doesn't appear dirty to the eye.

The HANDRAIL

Handrails are often overlooked when cleaning but they are likely to harbor germs due to their frequent use.

The DOOR HANDLE

Because of the frequent and inevitable use of most door handles, you can expect them to be germ covered.

The LIGHT SWITCH

Light switches - well-known for collecting germs and bacteria - are one of the filthiest surfaces in any building.
